

Dear Residents and staff –

Falcons Landing and the Loudoun County Health Department encourage residents to stay informed about COVID-19. The Centers for Disease Control and Prevention (CDC) and the Virginia Department of Health (VDH) are closely monitoring the outbreak of respiratory illness caused by COVID-19.

At this time, there are no confirmed cases in Virginia. There are 3 cases in Maryland, all related to travel in China.

Falcons Landing recommends and is taking the standard precautions listed below.

Falcons Landing is now screening 100% of all outside visitors for illness and travel at the Front Gate. For those individuals who have no current history of respiratory illness or who deny travel to affected areas will be permitted on campus.

We remain vigilant and will post periodic updates on Ch. 1970, in elevators, in email, on the resident portal and on the phone line on developments related to COVID-19 or additional measures to be implemented.

As a reminder, you can get the latest information on the following websites:
CDC website - www.CDC.gov Loudoun County Health Department -
<https://www.loudoun.gov/5307/Coronavirus>

The Falcons Landing Senior Staff remains on top of the latest developments and how continue to serve our residents to the highest quality of care.

COVID
CORONAVIRUS
DISEASE

STOP THE SPREAD OF GERMS IN LOUDOUN COUNTY

Help prevent the spread of respiratory diseases like COVID-19.

Avoid close contact with people who are sick.

Cover your cough or sneeze with a tissue,
then throw the tissue
in the trash.

Avoid touching your eyes, nose, and mouth.

Clean and disinfect frequently
touched objects and surfaces.

Stay home when you are sick,
except to get medical care.

Wash your hands often with soap
and water for at least 20 seconds.

For more information, visit loudoun.gov/coronavirus or
email health@loudoun.gov

COVID19A

What you need to know about coronavirus disease 2019 (COVID-19)

What is coronavirus disease 2019 (COVID-19)?

Coronavirus disease 2019 (COVID-19) is a respiratory illness that can spread from person to person. The virus that causes COVID-19 is a novel coronavirus that was first identified during an investigation into an outbreak in Wuhan, China.

Can people in the U.S. get COVID-19?

Yes. COVID-19 is spreading from person to person in parts of the United States. Risk of infection with COVID-19 is higher for people who are close contacts of someone known to have COVID-19, for example healthcare workers, or household members. Other people at higher risk for infection are those who live in or have recently been in an area with ongoing spread of COVID-19. Learn more about places with ongoing spread at <https://www.cdc.gov/coronavirus/2019-ncov/about/transmission.html#geographic>.

Have there been cases of COVID-19 in the U.S.?

Yes. The first case of COVID-19 in the United States was reported on January 21, 2020. The current count of cases of COVID-19 in the United States is available on CDC's webpage at <https://www.cdc.gov/coronavirus/2019-ncov/cases-in-us.html>.

How does COVID-19 spread?

The virus that causes COVID-19 probably emerged from an animal source, but is now spreading from person to person. The virus is thought to spread mainly between people who are in close contact with one another (within about 6 feet) through respiratory droplets produced when an infected person coughs or sneezes. It also may be possible that a person can get COVID-19 by touching a surface or object that has the virus on it and then touching their own mouth, nose, or possibly their eyes, but this is not thought to be the main way the virus spreads. Learn what is known about the spread of newly emerged coronaviruses at <https://www.cdc.gov/coronavirus/2019-ncov/about/transmission.html>.

What are the symptoms of COVID-19?

Patients with COVID-19 have had mild to severe respiratory illness with symptoms of

- fever
- cough
- shortness of breath

What are severe complications from this virus?

Some patients have pneumonia in both lungs, multi-organ failure and in some cases death.

How can I help protect myself?

People can help protect themselves from respiratory illness with everyday preventive actions.

- Avoid close contact with people who are sick.
- Avoid touching your eyes, nose, and mouth with unwashed hands.
- Wash your hands often with soap and water for at least 20 seconds. Use an alcohol-based hand sanitizer that contains at least 60% alcohol if soap and water are not available.

If you are sick, to keep from spreading respiratory illness to others, you should

- Stay home when you are sick.
- Cover your cough or sneeze with a tissue, then throw the tissue in the trash.
- Clean and disinfect frequently touched objects and surfaces.

What should I do if I recently traveled from an area with ongoing spread of COVID-19?

If you have traveled from an affected area, there may be restrictions on your movements for up to 2 weeks. If you develop symptoms during that period (fever, cough, trouble breathing), seek medical advice. Call the office of your health care provider before you go, and tell them about your travel and your symptoms. They will give you instructions on how to get care without exposing other people to your illness. While sick, avoid contact with people, don't go out and delay any travel to reduce the possibility of spreading illness to others.

Is there a vaccine?

There is currently no vaccine to protect against COVID-19. The best way to prevent infection is to take everyday preventive actions, like avoiding close contact with people who are sick and washing your hands often.

Is there a treatment?

There is no specific antiviral treatment for COVID-19. People with COVID-19 can seek medical care to help relieve symptoms.
